

# 5 moves to get from point A to B

The journey from point A to point B can be arduous. But with the right route planning technology, you can go from good to great with optimal routes, on-time deliveries and better care of your patients and your business.

**Answer the questions along our roadmap to keep your journey on track from start to finish.**

## 1 Am I wasting time planning my driver's routes manually?

Outdated tools using pen and paper, whiteboards and calendars can easily get lost or damaged and take more time and resources than necessary.

**Route optimization software only requires having addresses in the system and hitting enter for the suggested route. You save drivers and dispatchers valuable time, money and materials.**

## 2 Am I paying high fuel and transportation costs?

If your drivers are determining their schedules, you're likely paying too much for fuel.

**Take the guess work out by letting the software automatically map out the fastest route within seconds. You save time, gas and a lot of stress.**

## 3 Don't most route optimization solutions cost a lot of money?

**The short answer is yes. But with integrated cloud-based route optimization, one button clarifies the best route and communicates with the mobile app. It's easy, effective and less expensive than traditional route-planning processes.**

## 4 Can I track my drivers after they leave the warehouse?

Not knowing the whereabouts of delivery technicians can hurt you.

**With GPS tracking and real-time updates, you can locate a technician, view how far along they are in a delivery and oversee their remaining workload. You improve productivity and ultimately your bottom line.**

## 5 Am I able to make delivery changes on the fly?

**This goes hand-in-hand with driver transparency. As your dispatchers receive special delivery requests or new orders, the ability to view the status of current deliveries on a map and quickly optimize the drivers' route is not only key, but possible with the right optimization software. You're able to confidently manage and schedule new deliveries at a moment's notice.**

**Get to the finish line faster and more efficiently by replacing outdated, cumbersome and expensive manual scheduling, routing and delivery documentation with mobile delivery technology.**
